

# Archos Jukebox Recorder 20 Motherboard Replacement

This guide will show you how to replace the...

Written By: Shaun Rifield

# INTRODUCTION

This guide will show you how to replace the motherboard

---

## TOOLS:

[iFixit Opening Tool](#) (1)

[T5 Torx Screwdriver](#) (1)

[Phillips #00 Screwdriver](#) (1)

[Soldering Iron](#) (1)

[Lead-Free Solder](#) (1)

[Desoldering Pump](#) (1)

---

## Step 1 — Battery

- Remove the plastic cover over the batteries on both sides of the device.

## Step 2

- Remove the batteries (may require a plastic opening tool or spudger to pop the batteries out).

## Step 3 — Button Panel

- Using the Philips Screwdriver, remove the top 2 screws.
- ⓘ The screws are very small (2.5mm), put them somewhere you won't lose them.

## Step 4

- Using the Philips screwdriver, remove the bottom 2 screws (2.5mm).

## Step 5

- Remove the face.

## Step 6 — Motherboard

- Remove four surrounding T5 screws as shown

## Step 7

- Remove all four purple bumpers. You may have to bend the metal surround out of the way.

## Step 8

- Remove metal surround from the Jukebox. You may have to straighten out tabs that were bent during disassembly.

## Step 9

- Desolder the motherboard from the frame at the eight locations shown. You may need to use a [desoldering pump](#).

## Step 10

- Desolder the remaining two points on the backside of the Jukebox.
- The Motherboard should now be free from the frame and ready for repair or replacement.

---

To reassemble your device, follow these instructions in reverse order.
