INTRODUCTION

If the LED light is broken, or dead, this guide will teach you how to remove the broken component for replacement.

🔧 TOOLS:

- Phillips #0 Screwdriver (1)
- Soldering Iron (1)

Step 1 — Motherboard

⚠ Unplug the device from its AC power adapter; unplug anything connected to the input/output jacks.

● Remove the four 8mm Phillips #0 screws located on the back panel.

Step 2

● Remove the back panel to expose the motherboard.

Step 3

- Remove the two 11mm #0 Phillips screws located at the bottom of the motherboard.

Step 4

- Lift the indented end of the motherboard opposite the input/output jacks. Then, pull away from the input/output jacks to slide the motherboard out of the casing.

Step 5 — LED Light

- [Desolder](#) the back of the motherboard where the LED light is located.

To reassemble your device, follow these instructions in reverse order.
