Step 1 — Battery

⚠ Turn off laptop before beginning.

● Place the laptop upside down on a flat, stable surface.
Step 2

● Remove the 3mm screw in the location shown, using a Phillips #1 screwdriver.
Step 3

- Remove the panel from the sides and pull it out at an angle towards you.

Step 4

- Remove the five 3mm screws on the battery with a Torx (T8) screwdriver in the locations shown.

Step 5

- Disconnect the power cord from the battery by using a pair of tweezers, your fingers, or the opening tools from the iFixit pro tech tool kit.

- Pinch the clips on the left and right side while pulling on the cord at the same time.
Step 6

- Pull the battery towards you.

- Make sure to pull at an upward angle.

Step 7 — Hard Drive

- Remove the four 5mm screws with a Phillips #1 screwdriver.

Step 8

- Remove the cable from the motherboard that is attached to the Hard Drive.

- Use your fingers or the plastic opening tools to gently pull up on the clip, freeing the cable.
