

# Rain-X Chipped Windshield Repair

How to repair a chipped windshield.

Written By: Jeffrey Ritchie

---

## INTRODUCTION

This guide is applicable for any chip that is considered a star, flower, b.b. chip, and bull's-eye. It is not recommended for a spider crack (without air pocket), surface damage, or a regular crack.

### Preparatory Steps

- 1) Purchase the Rain-X Windshield Repair Kit
- 2) Move the vehicle to a dry and covered space, aim for room temperature.
- 3) Wash and dry the windshield completely.

### TOOLS:

- [Rain-X Windshield Repair Kit](#) (1)
-

## Step 1 — Rain-X Chipped Windshield Repair

- To remove excess glass, scrape over the surface of the chip with the included razor blade.

## Step 2

- Attach the Rain-X applicator base to the windshield, with the center of the base directly above the chip.

### Step 3

- Cut the tip of the repair resin bottle using the razor blade.

### Step 4

- To attach resin chamber, screw the chamber into the center ring of the applicator base.

## Step 5

- Screw the resin chamber clockwise until it is in contact with the windshield.

## Step 6

- Apply 3-6 drops of resin from the resin repair bottle into the resin chamber.

## Step 7

- To add the pressure driver, screw the driver clockwise into the resin chamber.
- ⓘ Make sure to tighten almost all the way.
- ⓘ Make sure the pressure driver is in contact with the windshield.

## Step 8

- Set timer for 4-6 minutes - Let the adhesive absorb into the chip for 4-6 minutes.
- ⓘ To determine if the repair resin has absorbed properly, look at the glass from a 45 degree angle.
- After the 4-6 minutes end, unscrew the pressure driver, turning it counter clockwise. Remove it to release any trapped air.

## Step 9

- Reinsert pressure driver by twisting clockwise.
- ⓘ This will discard any air remaining in the chip.

## Step 10

- To check for remaining damage, look for a dark color to appear.

## Step 11

- Leave to cure for 5-10 minutes.

## Step 12

- Once finished curing, remove the resin chamber and the pressure driver by screwing counter clockwise.

## Step 13

- Remove the applicator by using the tabs on the suction cups.

## Step 14

- Clean off any excess adhesive from the windshield.

## Step 15

- Cover the chip gently with a curing strip.

## Step 16

- Move the car into direct sunlight and leave for 4-6 hours.
- Remove the curing strip and enjoy.

To reassemble your device, follow these instructions in reverse order.
