

# Nokia Lumia 925 Display Replacement

How to replace a Nokia Lumia 925 display.

Written By: Guillermo Lara

 **TOOLS:**

- [T7 Torx Screwdriver](#) (1)
  - [T5 Torx Screwdriver](#) (1)
  - [iFixit Opening Tools](#) (1)
  - [Tweezers](#) (1)
-

## Step 1 — Motherboard

- Remove the sim card holder by inserting tweezers into the hole. Push down and the holder will spring back up.
- Pull out the holder until it is completely separate.
- ⓘ Something like a paperclip will work if there are no tweezers available.

## Step 2

- Slide a plastic opening tool under the back cover.
  - Slide the tool around the outsides of the cover to fully dislodge the pins holding the cover to the phone.
- ⚠ Some pins are facing the opposite way from the others.

## Step 3

- Remove the 3 screws using the T7 Torx screwdriver.
- Unclip the black tab connector.

## Step 4

- Remove the silver metal cover.

⚠ Be careful of the tape under the right square side of the panel. Using a spudger helps.

## Step 5

- Unclip the two orange tabs.
- Remove the four silver screws using the T5 Torx screwdriver.

## Step 6

- Remove the motherboard by sliding tweezers between it and the back of the screen. Lift up.

## Step 7 — Display

- Push the screen from the inside of the phone.
- Pull the screen off.
- ⓘ Slide the electronic strip through the small opening.

To reassemble your device, follow these instructions in reverse order.
