INTRODUCTION

Is your Hover-1 Ultra not charging to full battery, or not powering up at all? If you are experiencing these problems, it can be fixed with a very simple replacement of the charging port of your device. You will need a Phillips #1 screwdriver to remove the screws and an adjustable crescent wrench to remove the port
TOOLS:

- Phillips #1 Screwdriver (1)
- 7/16 Crescent Wrench (1)

This document was generated on 2020-11-28 07:10:22 AM (MST).

Step 1 — Charging Port

- Orient the hoverboard so that the pads are facing down.

- With the Phillips #1 screwdriver, remove all 18 of the screws on the underside of the board.

- Carefully remove the shell, lifting directly up.

Step 2

- Using your hands or a crescent wrench, begin removing the charging port.

- Turn the charging port counter-clockwise to release it from the shell.

Step 3

- Unclip the insulated red and black wires attached to the port from the motherboard

Step 4

- Remove the charging port through the assembly.

- Place new charging port through the assembly.

- Clip red and black insulated wires into the motherboard.

To reassemble your device, follow the instructions for step 1 in reverse order.
