Step 1 — Bottom Cover

- Place your thumbs in the depressions cut into the bottom cover.

- Rotate the bottom cover counter-clockwise until the white dot painted on the bottom cover is aligned with the ring inscribed on the outer case.

  - (i) You do not need to apply much downward pressure while turning.

Step 2

- Tilt the mini enough to allow the bottom cover to fall away from the outer case.

- Remove the bottom cover and set it aside.

Step 3 — RAM

- Release the tabs on each side of the RAM chip by simultaneously pushing each tab away from the chip.

- ⓘ These tabs lock the chip in place and releasing them will cause the chip to "pop" up.

- After the RAM chip has popped up, pull it straight out of its socket.

- ⚲ Repeat this process if a second RAM chip is installed.

To reassemble your device, follow these instructions in reverse order.
