TOOLS:

- [Lighter](#) (1)
- [Zip Ties](#) (1)

Step 1 — How to stop water gun leaks

- Find where your water gun is leaking.
- Obtain a zip tie of a similar color.
- Heat up the end of that zip tie with a lighter or small torch
- Allow the melted plastic from the zip tie to fill in any voids that water could leak from

Be careful not to dispose of the remaining zip tie right away. Allow it to cool down first!
