

# Water Filtration System Filter Replacement

How to change a filter in a water filtration system.

Written By: Tahj Ramirez

## INTRODUCTION

Need to know how to replace the filter for a water filtration system? I am going to show you how to do this so that you can drink clean, filtered water. There is no risk during this procedure and it is simple; no background experience is needed. This is a helpful guide to show you how to replace a used water filter.

Note: Filters need to be changed every three months, otherwise the water will be undrinkable and can pose health risks.

### TOOLS:

- [Canister Wrench](#) (1)

### PARTS:

- [Unused Water Filter](#) (1)

## Step 1 — Filter

- Turn off water supply.

## Step 2

- Press the button on the top of the filtration device to release water pressure and let excess water drain.

### Step 3

- Unscrew the filter canister using the canister wrench.

### Step 4

- Take out the old filter and discard it.

## Step 5

- Clean out the inside of the filter canister with soap and water.

## Step 6

- Put the new filter inside the filter canister, making sure it goes in properly.

## Step 7

- Screw the filter canister back into place using the canister wrench, making sure it's tightly screwed in.

## Step 8

- Turn the water supply back on.

## Step 9

- Press the button on the top of the device to release any air trapped inside.

You have now successfully replaced your water filter.
