

# Lenovo IdeaPad Flex 5-1570 Display Replacement

The screen/display is one of the most common...

Written By: Justin Ogihara

# INTRODUCTION

The screen/display is one of the most common repairs in all electronic devices. Screens and displays can easily crack or break when dropped from elevated surfaces and heights. Cracking the screen can result in cosmetic damages to the device, and any damage to the display may impact the overall functionality of a device. If your device is not displaying images properly or if there are dead pixels on the display, it may be time to replace it. Follow this guide to remove and replace the display of your device.

Removing the display from the Lenovo IdeaPad Flex 5-1570 can be difficult and tricky. In step 27 of this guide, you'll notice the adhesive strips holding the screen to the rest of the display assembly. These adhesive strips are very strong, and you can easily break the screen if there is excessive force in removing the screen. The adhesive strips are approximately 1 cm wide and are located\* 2 cm from the edges of the screen and 3 cm from the top. We recommend you to use a heat gun, hair dryer, or an iOpener to heat and loosen the adhesive strips. If you plan on using the iOpener, make sure to read the [iOpener instructions](#) before proceeding with this guide.

\*[This video](#) does a good job of explaining and showing the location of the adhesive strips used to hold the screen together.

## TOOLS:

[Phillips #00 Screwdriver](#) (1)  
[iFixit Opening Tool](#) (1)  
[Spudger](#) (1)  
[Nylon Tipped Tweezers](#) (1)  
[iFixit Opening Picks \(Set of 6\)](#) (1)  
[iOpener](#) (1)  
[Heat Gun](#) (1)

## PARTS:

[5D10N46973 - Lenovo Laptop LCD Touch Screen - Genuine](#) (1)  
[Lenovo Flex 5-1470 and Flex 5-1570 FHD LCD Panel](#) (1)

---

## Step 1 — Back Panel

- Remove the ten 5 mm Phillips #00 screws that are holding the back panel on.

## Step 2

- Use a spudger to pry open the back case at the two hinge cutouts.
- Gently use the plastic opening tool around the edges of the laptop to pry up the clips holding the rest of the back panel.

### Step 3

- Once all the clips have been disengaged, lift off the back cover.

### Step 4 — Battery

- Remove the two 5 mm Phillips #00 screws that secure the battery in place.

## Step 5

- Using your fingers, grasp the entire bundle of wires to pull the battery cable from its connector. This will cut off power to the motherboard.
- ⚠ Be sure to apply even pressure across the wires and connector to not damage the battery cable.
- Remove the battery from the device.

## Step 6 — Hard Drive

- Remove the three 5 mm Phillips #00 screws that secure the hard drive.

## Step 7

- Using your hands, gently pull the hard drive back, sliding it out from the port.

## Step 8 — Fan

- Remove the two 5 mm Phillips #00 screws that secure the fan in place.

## Step 9

- Using your hands, remove the wire that is wrapped around the base of the fan.

## Step 10

- Disconnect the wire holding the fan and the motherboard together.
- Remove the fan from the device.

## Step 11 — Heatsink

- Using the Phillips #00 screwdriver, remove five 5 mm screws.

① For proper screwdriver technique, please visit the [Screwdriver Best Practices guide](#).

## Step 12

- Carefully remove the heatsink from the device.
- ✦ During reassembly, don't forget to apply thermal paste onto the heatsink. For proper technique on thermal paste application, please visit the [How to Apply Thermal Paste guide](#).

## Step 13 — Speakers

- Using the iFixit nylon tipped tweezers, disconnect the wire that connects the speakers to the motherboard.

## Step 14

- Using your hands, gently pull the left speaker up and out of the device.

## Step 15

- Repeat the previous step for the other speaker and remove the speakers from the device.

## Step 16 — Motherboard

- Using the Phillips #00 screwdriver, remove the three 5 mm Phillips #00 screws securing the motherboard.

## Step 17

- Disconnect the auxiliary port cable from the motherboard.

## Step 18

- Using a plastic opening tool, unlock the four ZIF connectors of the flat cables.
- Lift up the connector locking tab and disconnect the cables from the motherboard.

## Step 19

- Disconnect the display cable from the motherboard.

## Step 20

- Using the plastic opening tool, unlock the connector for the side ports panel and disconnect the cable from the motherboard.

## Step 21

- Carefully lift and remove the motherboard from the device.

## Step 22 — Display Assembly

- Using the Phillips #00 screwdriver, remove the four total 5 mm screws from the left and right hinges (two screws on each hinge).
- ① For proper screwdriver technique, please visit the [Screwdriver Best Practices guide](#).

## Step 23

- Disconnect the display assembly from the rest of the device.

## Step 24 — Display

- Flip the display assembly so that the screen is facing you.
- Using a spudger, remove the screw cover to expose two screws. Repeat this step for the cover on the right side of the screen.

⚠ The spudger may not provide enough prying power to remove the screw covers. If need be, carefully use the metal spudger to complete this step.

## Step 25

- Using the Phillips #00 screwdriver, remove the two 3 mm screws from the display (one screw on each side).

## Step 26

- Using the opening picks and a plastic opening tool, remove the middle screw cover at the bottom of the display assembly to expose three screws.

**⚠ Using the plastic opening picks and tools may not provide enough prying power. If need be, use the metal spudger to remove the screw covers.**

- Use the Phillips #00 screwdriver to remove three 3mm screws from the display assembly.

## Step 27

- Carefully insert the opening picks into the edge of the display and display cover.
- Work your way around the screen to remove it from the assembly.
- ① You may want to use a heat gun or hair dryer to heat up the adhesive holding the screen to the rest of the display assembly. These adhesive strips are located approximately 2 cm away from left and right edges of the screen and 3 cm from the top. [This video](#) shows where these strips are located.
- ① Alternatively, using the iOpener may heat up the adhesive enough to remove the screen from the rest of the display. Please visit the [iOpener Instructions guide](#) for more details on properly heating the iOpener.

## Step 28

- Lift the screen up and away from the rest of the display assembly.
- ☑ As stated in the previous step, there are two strong adhesive strips holding the screen to the rest of the display assembly, so please proceed with caution when separating the screen from the assembly.

---

To reassemble your device, follow these instructions in reverse order.

Take your e-waste to an [R2 or e-Stewards certified recycler](#).
