

# Weiser Smartcode 10 Touchscreen Electronic Lock Battery Replacement

Do you know when it's time to change the batter...

Written By: Brandon Brown

## INTRODUCTION

Do you know when it's time to change the batteries in your Weiser lock? Here are some hints:

1. Your electronic lock flashes red.
2. Your keypad doesn't light up.
3. If you have a home security provider, they'll probably let you know!

In this guide, you will learn how to change the batteries of your Weiser Smartcode 10 Touchscreen Electronic Lock.

(Try saying *that* ten times fast!)

Before starting this guide, make sure all home security connected to the door lock is disarmed. Let's begin!

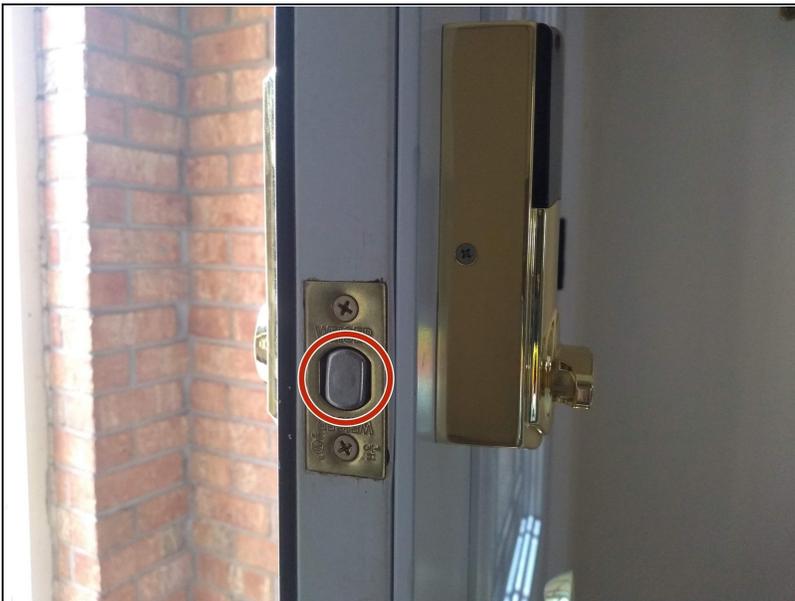

---

### TOOLS:

[Phillips #1 Screwdriver](#) (1)

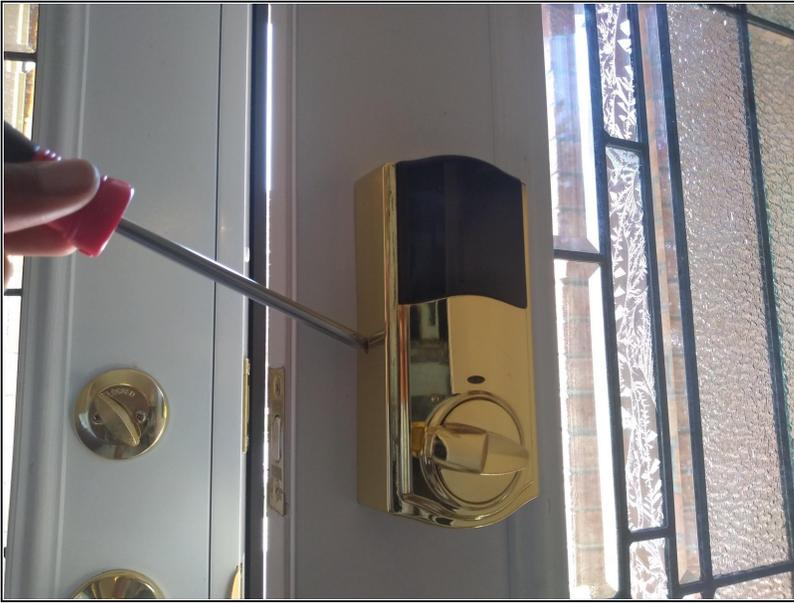

---

## Step 1 — Battery

- Unlock your door and open it.
- Make sure the bolt/latch is fully inside the door before you continue.

## Step 2

- Using the Phillips #1 screwdriver, remove the three 8 mm screws on the left, right and bottom side of the cover.

## Step 3

- Take the exterior cover off of the door lock.

## Step 4

- Find the battery pack (marked "DOOR" in between two arrows) at the top of the lock.

## Step 5

- Slide the battery pack upwards.
- Turn the pack over to reveal the batteries.
- Replace the four AA batteries.

## Step 6

- Reinsert the battery pack with the word "DOOR" facing you.
- Wait until you see a green LED light flashing and/or hear two beeps to indicate working batteries.
- ⓘ If there is no green light, repeat steps 5 and 6. Check to see if the batteries are placed correctly or if newer batteries are required.

## Step 7

- Check that the bolt/latch is still inside the door.
- Take the exterior cover and point the narrow end of the knob to the right.
- Place the cover on the lock and reinsert the screws.
- ⓘ Try not to fasten the screws too tightly as they could get damaged in the process.

## Step 8

- ☑ To confirm the finished repair, go to the front of the door and place the back of your hand on the touchscreen to activate the keypad.

---

Congratulations! Make sure to redo this process each year to ensure your device continues to work!
