

Google Stadia Controller Battery Replacement

How to replace a worn out or dead battery in a Google Stadia controller.

Written By: Dominik Schnabelrauch

INTRODUCTION

Use this guide to replace a worn out or dead battery in a Google Stadia controller.

Although you don't need special tools to open the Google Stadia controller, the opening process is difficult and requires a lot of force. The case of the controller is held together by super tight plastic clamps which require a tool solid enough to withstand the pressure it takes to pry them open. Take your time and try not to get frustrated during the opening procedure—otherwise you're likely to scratch or otherwise damage your controller.

If your battery is swollen, [take appropriate precautions](#). For your safety, **discharge your battery below 25%** before disassembling your controller. This reduces the risk of a dangerous thermal event if the battery is accidentally damaged during the repair.

You'll need replacement adhesive when reassembling your device.

TOOLS:

- [iOpener](#) (1)
- [iFixit Opening Picks \(Set of 6\)](#) (1)
- [Jimmy](#) (1)
- [TR8 Torx Security Screwdriver](#) (1)
- [Precut Adhesive Card](#) (1)
- [Pro Tech Toolkit](#) (1)

optional

- [ESD Safe Tweezers Blunt Nose](#) (1)
 - [Spudger](#) (1)
-

Step 1 — Loosen the screw cover adhesive

- Apply a [heated iOpener](#) to the rear side of the Stadia controller where the screw cover is located to loosen the adhesive underneath. Apply the iOpener for at least two minutes.

Step 2 — Insert an opening pick

- Insert the tip of an opening pick into the gap between the plastic screw cover and the rear case of the controller.

Step 3 — Remove the screw cover

- Slide the opening pick along the screw cover to slice the adhesive.
 - Use a pair of tweezers or your fingers to remove the screw cover.
- ☒ You might want to replace the screw cover adhesive during reassembly. Apply a bit of high-concentration isopropyl alcohol (>90%) to a Q-tip or use a cleaning pad to gently remove the leftover adhesive on the rear cover of the controller before installing new adhesive.

Step 4 — Unfasten the rear case screw

- Use a Torx T8 screwdriver to remove the 9.6 mm-long screw securing the rear case.

Step 5 — Disassembly information

- The front cover assembly of the Stadia controller is held in place by various tight plastic clamps. They are very hard to open and snap back in place easily.

⚠ The opening procedure requires some force, however, try to avoid damaging your controller case along the way.

Step 6 — Pry open the stadia controller

- Insert a Jimmy into the gap between the front and back cover assembly at the inside of the left controller handle.
- ⓘ To make sure you insert the Jimmy at the correct position where the clamps are located, you can use [this photo](#).
- Tilt the Jimmy upwards and push it into the gap between the covers at the same time to pry open the plastic clamp. You should hear a *clack* noise once the clamp pops open.
- ⓘ Once the clamp is completely open, the gap between the two controller covers should be about 2-3 mm wide.

Step 7 — Insert an opening pick

- Insert an opening pick in a steep angle into the gap you created to prevent the first clamp from popping back into its closed position.

Step 8 — Pry open the Stadia controller

 To make sure you insert the Jimmy at the correct position where the clamps are located, you can use [this photo](#).

- Insert a Jimmy into the gap between the front and back cover assembly at the outside of the left bottom end of the controller handle.
- Repeat the previous opening procedure to open the three plastic clamps at the outside of the left controller handle.

Step 9

- Insert a Jimmy into the gap between the front and back cover assembly between the left shoulder button and the charging port at the top edge of the Stadia controller.
- Tilt the Jimmy upwards and push it into the gap between the covers at the same time to pry open the plastic clamp. You should hear a *clack* noise once the clamp pops open.
- Repeat the previous procedure at the clamp between the right shoulder button and the charging port.

Step 10

- Insert a Jimmy into the gap between the front and back cover assembly at the right edge of the right controller handle.
- Repeat the previous opening procedure to open the three plastic clamps at the outside of the right controller handle.

Step 11

- Insert a Jimmy into the gap between the front and back cover assembly at the inside of the right controller handle.
- Repeat the previous opening procedure to open plastic clamps at the inside of the left controller handle.

Step 12

- Insert a Jimmy into the gap between the front and back cover assembly at the bottom edge of the Stadia controller right to the headphone jack.
- Tilt the Jimmy upwards and push it into the gap between the covers at the same time to pry open the plastic clamp.
- Repeat the previous procedure at the clamp left to the headphone jack.

⚠ Do not try to remove the front cover assembly all the way yet. It's still connected to the rear cover assembly.

Step 13 — Unfold the front cover assembly

⚠ Avoid straining the front cover assembly cable during this step.

- Carefully lift the front cover assembly and fold it to the left side of the Google Stadia controller.

Step 14 — Remove the adhesive tape

- Use a pair of tweezers to peel the clear protective tape off the ZIF connector on the left side of the rear case.

Step 15 — Open the ZIF connector

- Use the pointed end of a spudger to open the [ZIF connector](#) holding the button contact board cable in place.

Step 16 — Disconnect the flex cable

- Use a pair of tweezers to carefully disconnect the flex cable of the button unit by pulling it out of the ZIF connector in a flat angle.
 - Separate the front from the rear assembly.
- ☒ Remove the thumbsticks by pulling them straight upwards for an easier handling in case you want to do further disassembly.

Step 17 — Unfasten the screws

- Use a Torx T8 screwdriver to remove the seven 9.6 mm-long screws securing the motherboard assembly.

Step 18 — Pry up the motherboard assembly

- ⓘ The motherboard assembly is held in place at four points in the controller's rear cover.
- ⓘ Make sure to use the long and not the curved edge of the Jimmy during the following prying procedure.
 - Insert a Jimmy next to the right shoulder button and black plastic clamp of the motherboard assembly.
 - Align the long edge of the Jimmy with the corner of the black plastic clamp.
 - Pry up the motherboard assembly by tilting the Jimmy downwards to open the plastic clamp.

Step 19

- Insert a Jimmy next to the left shoulder button and black plastic clamp of the motherboard assembly.
- Align the long edge of the Jimmy with the corner of the black plastic clamp.
- Pry up the motherboard assembly by tilting the Jimmy downwards to open the plastic clamp.

Step 20

- Insert a Jimmy at the top edge of the Google Stadia controller just above the charging port.
 - Pry up the top edge of the motherboard assembly by tilting the Jimmy downwards.
- ⚠ The charging port is clamped into an opening in the rear cover of the stadia controller. Make sure the charging port is not stuck in its recess during the prying procedure.**
- ☑ During reassembly make sure the charging port snaps back into its recess.**

Step 21 — Insert an opening pick

- Insert an opening pick at the top edge of the Stadia controller to prevent the charging port from snapping back into place.

Step 22 — Warning

 In the following step you'll free the headphone jack from its recess in the controller housing:

 **Avoid prying onto the black plastic cover during the following procedure.**

- Pry at the edge of the motherboard instead.

Step 23 — Insert a Jimmy

- Insert a Jimmy into the gap between the rear cover and the motherboard left of the headphone jack.

Step 24 — Pry up the motherboard assembly

- Pry up the motherboard assembly by tilting the Jimmy downwards.

⚠ The headphone jack is clamped into an opening in the rear cover of the controller. Make sure the headphone jack is not stuck in its recess during the prying procedure.

- ☑ During reassembly make sure the headphone jack snaps back into its recess.

⚠ Do not try to remove the motherboard assembly all the way yet. It is still connected to the rear cover by the battery cable.

Step 25 — Lift the motherboard assembly

- Carefully lift the left edge of the motherboard assembly in order to access the battery connector.

Step 26 — Separate the motherboard assembly

- Use a pair of tweezers to disconnect the battery cable from the motherboard.
- Separate the rear cover from the motherboard assembly.

Step 27 — Unfasten the screws

- Use a Torx T6 screwdriver to remove the two 6.1 mm-long screws securing the battery.

Step 28 — Cut the battery cable adhesive

- Use a flush cutter to carefully cut the adhesive holding the battery cable in place.

Step 29 — Remove the battery

- Remove the battery.

✦ Make sure to align the battery and the back cover of the controller correctly during reassembly.

To reassemble your device, follow these instructions in reverse order.

For optimal performance, [calibrate your newly installed battery](#) after completing this guide.

Take your e-waste to an [R2 or e-Stewards certified recycler](#).
