

# 2013 Nissan Rogue Key Fob Battery Replacement

This guide will teach you how to replace a dead battery in your 2013 Nissan Rogue key.

Written By: Hober Granados

## INTRODUCTION

If your 2013 Nissan Rogue car no longer responds to the keyless remote, it is most likely due to a dead battery, which needs to be replaced. I will show you how to remove the battery and replace it properly step by step.

It's important to realize that 2013 Nissan Rogue is a push-to-start vehicle and in order to start the car, the key must be in close proximity. Without a functioning battery, the car will not be able to receive signals from the keyless remote to know it is in proximity to start the car.

### PARTS:

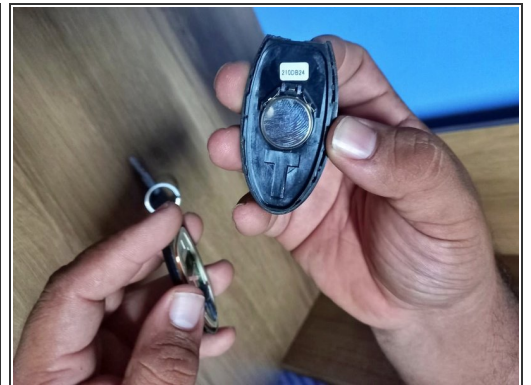

- [CR2025 Battery](#) (1)
-

## Step 1 — Key Fob Battery

- Remove the key from the keyring by pulling the button on the back of the keyring from right to left while pulling the loop at the top.

## Step 2

- Carefully separate the back cover from the rest of the remote.
- ⓘ You can use a tool to make this step easier, or you can just do it using your fingers, being very careful.

### Step 3

- Carefully remove the individual pieces from inside, one at a time.

 There are two pieces in total to remove.

### Step 4

- Remove the battery from the remote.
- Put the new battery into the remote and press down firmly to make sure it is secure.
-  Be sure to check that your new battery matches with your old battery.

## Step 5

- Carefully snap the back cover onto the rest of the remote.

## Step 6

- Put the key back into the remote.

## Step 7

- Test the remote key to make sure it works properly.
