 **TOOLS:**

Tournevis cruciforme #0 (1)

Outil pour ouvrir iFixit (1)

---

## Step 1 — Screen

- Begin removing the 3/16" screws for the device.

## Step 2

- Turn the device and remove the additional 3/16" screws.

## Step 3

- Turn the device and remove the additional 3/16" screw.

## Step 4

- Take the white cover plate off.

## Step 5

- Using the plastic opening tools, pry open the camera from the bottom.
- ⓘ This may require a moderate use of force because of the sealing glue.

## Step 6

- Gently pull the connector away from the motherboard.

## Step 7 — Lens and Motherboard

- Unscrew the motherboard's screws. There are 4 3/32" screws and 3 5/32" screws.

## Step 8

- Unscrew the lens' screws. There are 1 black 4/32" screw, 3 3/16" black screws, and 2 white 5/32" screws.

## Step 9

- Pull these connectors away from motherboard.

## Step 10

- Lift the motherboard and lens out of the case.

## Step 11 — Unscrew

- Remove all the screws circled. There is 1 1/8" screw by the flash, 1 9/32" screw that holds the flash button, 2 5/32" screw that is on the

grey frame for the flash, and 2 5/32" screws that holds the cable frames on the top left.

## Step 12

- Unscrew the 3 5/32" screws that cover the battery plate.

## Step 13

- The black plates on the other side can be removed after these screws.

## Step 14

- Pull the flash and battery case out of the device.

## Step 15 — Capture button

- Unscrew the 2 5/32" screws on the grey plate.

## Step 16

- Pull the plate aside and unscrew 2 1/8" screws on the button.

## Step 17

- The Capture button can now be removed.

To reassemble your device, follow these instructions in reverse order.
