## Step 1 — Clip Side Repair

- Remove both 6 mm screws from the clip side of the camera.
  - After you have removed the two screws, remove both the clip and the plate behind the clip so that the inside of the camera is exposed.
- i** If one or more of the clips appear to be broken, the back plate might need to be replaced.

## Step 2 — Top of Camera

- The top of the camera does not contain screws. You do not need to remove anything from the top of the camera.

### Step 3 — Plug Side

- Remove the two 5 mm screws on the side of the camera with the plug.
- Open the compartment door and remove both 6 mm screws inside of the compartment door. This will allow you to remove the tan piece held by the screws.

### Step 4 — Bottom

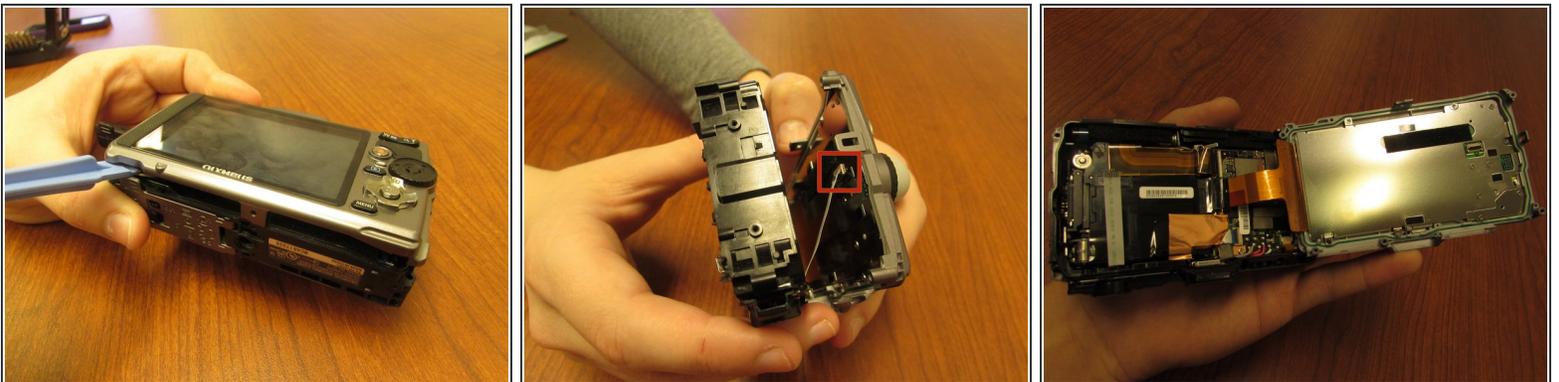

- Turn the camera so that you are looking at the bottom of the camera.
- Remove the two 4 mm screws from the bottom of the camera.
- ⓘ The screws are different. The rear screw is has an unthreaded shank to locate the outer shell while screwing into the inner frame.

## Step 5 — Front Panel

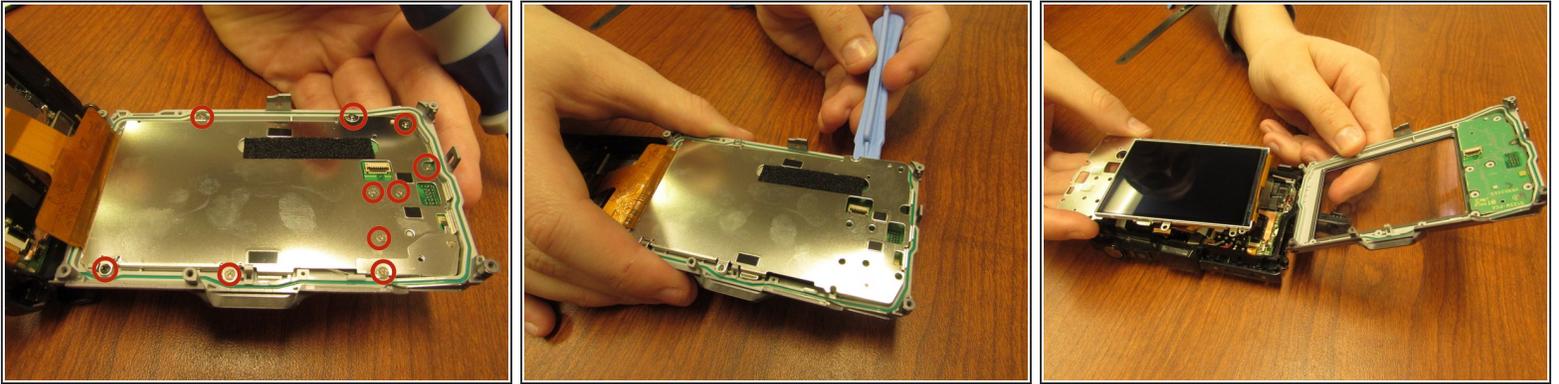

- Use the plastic opening tool to remove both components of the front panel. This includes the black part on the outside of the front panel and the main silver panel.
- ⓘ Once every screw and panel is removed, you can replace the backplate to make your camera weatherproof again.

## Step 6 — Opening the Internal Case

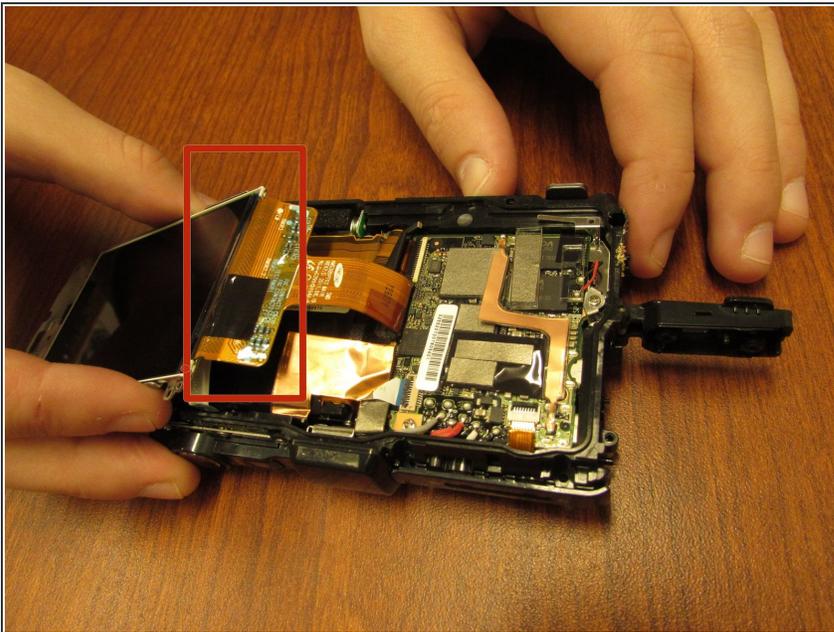

- Using the plastic opening tools, carefully open the case.
- ⚠ Do not tear the white circuit ribbon.

## Step 7 — Opening the Screen's Protective Cover

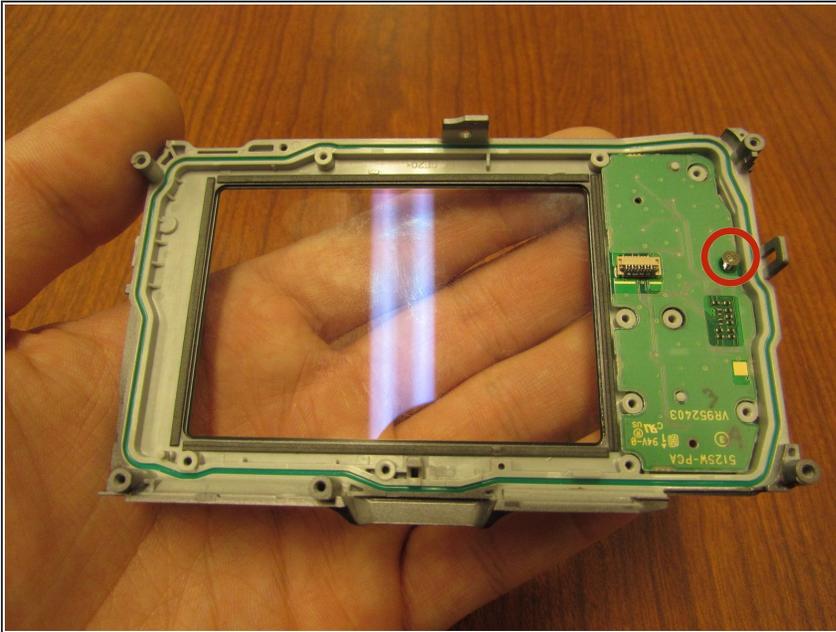

- Using the screwdriver, remove the ten 3mm anchor screws.
- Using the plastic opening tool, open the protective cover so that the screen is exposed.

## Step 8 — Unclipping the Screen from the Circuit Ribbon

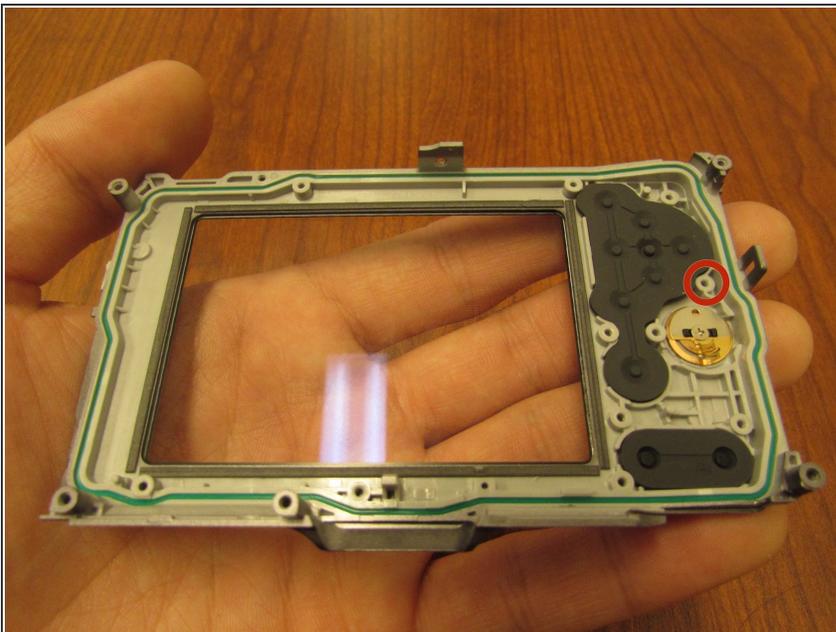

- Carefully unclip the screen from its circuit ribbon.

## Step 9 — Circuit Board For Back Buttons

- After removing this plastic casing from the screen, the only thing holding the circuit board to the plate is a screw 3 mm in length, with a diameter of 2.5 mm. Remove this screw.

## Step 10

- This is what your device should look like after removing the one screw.

To reassemble your device, follow these instructions in reverse order.
