

Smart Parts Ion Hopper and the Air Tank Replacement

This guide will show you how to safely remove the hopper and air tank from the Smart Part Ion Paintball Gun.

Step 1 — Hopper and the Air Tank

- Remove the air tank by rotating it counterclockwise.

 Do not pull the trigger or jostle the gun, there will still be pressurized air inside the gun that could be expelled and cause bodily harm if injected into eyes and/or skin.

 The pressure gauge will indicate the leftover air in the gun.

Step 2

- Remove the hopper by pulling it out of the feed tube, located on the top of the body. The hopper should easily come off when pulled straight up.

To reassemble your device, follow these instructions in reverse order.
