INTRODUCTION

Unplug the vacuum before repair. The cord is easily disconnected and replaced once the vacuum is disassembled adequately.

🔧 TOOLS:

- Phillips #2 Screwdriver (1)
- T20 Torx Screwdriver (1)
- Metal Spudger (1)

Step 1 — Lower Motor Housing

- Remove the orange main housing unit from the vacuum bucket by pulling outward on the handle tabs while lifting upward as shown.

Step 2

- Remove the five 15mm PH2 screws.

Step 3

- Remove the 15 mm T20 screw. This screw is located nearest the power cord.

Step 4

- Gently separate the upper and lower sections of the main housing.

Step 5 — Power Cord

- Pull the black wire from the power cord out of the switch.

- ⓘ There are no clips or tabs that hold this wire in place. Just pull strongly to remove it.

- ⓘ Don't remove both black wires. Only the black wire that comes from the power cord itself needs to be removed. The one going to the motor can be left alone.

Step 6

- Remove the five 15mm screws from the plastic motor cover and power cord clamp using a PH2 screwdriver.

Step 7

- Remove the plastic motor cover.

- (i) Be sure to loosen the white wire from the notch in the plastic motor cover by pulling it upwards.

Step 8

- Detach the white wire from the motor by pulling upwards on the wire as you depress the small metal tab on the connector with a nylon spudger.

⚠ When working with electronics, it's important to choose a tool that's ESD-safe to avoid accidental damage to the device. The regular black nylon spudger or a plastic opening tool should be used whenever possible.

To reassemble your device, follow these instructions in reverse order.
