INTRODUCTION

If the DYMO LabelManager 160's keys are unresponsive, you may need to replace the keypad. This guide provides the replacement steps.

⚙ PARTS:

- Phillips #000 Screwdriver (1)

Step 1 — Batteries

- Place the device face-down to access the battery compartment.

Step 2

- Remove the compartment cover to reveal the batteries. Remove the 6 old batteries.

Step 3 — Keyboard

- To open the cartridge compartment, simply lift on the front of the device.

Step 4

- Using a Phillips #0 screwdriver, remove the four 1.3mm screws from the cartridge compartment and two 1.2mm screws from the battery compartment.

Step 5

- Using a spudger or other tool, lift and remove the front of the device. This should be done all around the device to ensure the two parts split correctly.

Step 6

- Gently remove the rubber keyboard from the device.

To reassemble your device, follow these instructions in reverse order.
