

Removing Bottom of iMac G4 15" 700 MHz EMC 1873

Removing the white bottom of the the base, giving us access to the components inside.

Written By: Elliot Freerks

INTRODUCTION

We will unscrew the bottom faceplate, then remove the base to access the internal components.

TOOLS:

- [Phillips #00 Screwdriver](#) (1)
 - [Spudger](#) (1)
 - [T15 Torx Screwdriver](#) (1)
-

Step 1 — Outer Base Plate

- ① Place the computer monitor face down on a safe, harmless surface.
- Using a Phillips #00 screw driver, remove the four 6.86 mm screws from the metal plate.

Step 2

- Remove the metal plate from bottom of the iMac G4.
- ① The four screws do not completely separate from the metal plate.

Step 3 — RAM DIMM

- Release the tabs on each side of the module by simultaneously pushing each tab away from the RAM.
- ⓘ These tabs lock the module in place and releasing them will cause the module to "pop" up.
- Remove the RAM module from the iMac.

Step 4 — AirPort Card

- Use a spudger to lift and remove the AirPort's antenna connector.
- ⓘ This step is only applicable to iMacs that came with an AirPort card installed.

Step 5 — Removing the Lower Case

- Remove the four 28.07mm Torx #15 screws from the lower case.

Step 6

- Open the base by carefully pulling straight off, do not rotate the cover.

⚠ Open slowly to ensure that no cables are damaged or disconnected.

Step 7

- Squeeze the small black tab and wiggle gently to remove the colored power cable.

- ⚠ Do not pull directly on the colored wires.
- ⓘ Do not remove black grounding wire.

Step 8

- Grab both sides of the blue connector and firmly pull to remove it from the motherboard.

- ⚠ Do not pull directly on the ribbon cable.

To reassemble your device, follow these instructions in reverse order.
